SimbaNET
... Keeping Africa Ahead

**“Critical government agency trust SimbaNET
to secure their ICT perimeter ”**

Case Study | UTM

About Client

A government information body with over 3000 employees stationed across the Kenyan counties. Their primary mode of communication is via email messaging that requires encryption and security.

The key functions of the company include collection of information and statistics for security analysis.

Requirements

- Security for all outbound and inbound email communication including SPAM protection, phishing protection, email encryption
- Network level security to provide security from network breaches including APS, IPS, DDoS, Brute force attacks

Solution

- A security solution that shall provide protection from both application & network vulnerabilities. The platform to be deployed on premise and cannot be provided via cloud platform due to the sensitivity of the data
- The solution deployed is a Cyberoam CR35iNG with licensing that includes SPAM protection, DDoS protection, IPS prevention, Anti-Virus and Web Application Firewall

Benefits

- Daily reports and graphs on network usage and security breach attempts including country of origin
- SPAM and phishing email analysis
- Network capacity utilisation control
- Identification of the most common cyber threats thus helping in planning of the future security implementations
